#### CloudWatch metrics

Lambda sends runtime metrics for your functions to Amazon CloudWatch. The metrics shown are an aggregate view of all function runtime activity. To view metrics for the unqualified or \$LATEST resource, choose **Filter by**. To view metrics for a specific function version or alias, choose **Aliases** or **Versions**, select the alias or version, and then choose **Monitor**.

#### CloudWatch Logs

Lambda logs all requests handled by your function and automatically stores logs generated by your code through Amazon CloudWatch Logs. To validate your code, instrument it with custom logging statements. The following tables list the most recent and most expensive function invocations across all function activity. To view logs for a specific function version or alias, visit the **Monitor** section at that level.

##### Recent invocations

AWS X-Ray and CloudWatch ServiceLens

ServiceLens integrates CloudWatch with AWS X-Ray to provide an end-to-end view of your application. These integrated services provide a service map, which displays your service endpoints and resources as nodes and highlights the traffic, latency, and errors for each node and its connections.
